PROFESSIONAL SUMMARY

Results-driven PHP Developer specializing in the PHP and Laravel ecosystem. Over 2 years of professional experience architecting robust RESTful APIs, designing scalable Web Applications using the N-Tiers pattern, and successfully delivering multi-tenant applications, CRM platforms, and payment integrations. Proven track record of optimizing system performance, Troubleshooting complex issues, and ensuring data storage integrity in fast-paced software engineering roles. Possesses strong Problem-solving skills.

SKILLS

- **Programming Languages:** PHP, JavaScript, Python, C#
- **Frameworks & Libraries:** Laravel, Vue.js, Livewire, Alpine.js, Django, Bootstrap, jQuery, Ajax
- **Databases & Data Storage:** MySQL, NoSQL, RESTful APIs, MVC, OOP, SOLID Principles, 3rd Party Integrations
- **Ecosystem & Code Versioning Tools:** Laravel Filament, Breeze, Inertia.js, Laravel Forge, Git, GitHub, GitLab, Mercurial, SVN, Docker, Nginx, CI/CD
- **Core Competencies:** Server-side, Coding, Front-end Integration, Web Applications Development, HTML5, CSS3, Problem-solving, Troubleshooting

EXPERIENCE

DomApp

Feb 2025 – Present

PHP Developer

- Architected and developed the EUA project API utilizing Laravel and the N-Tiers design pattern, implementing robust authentication and 3rd-party API integrations, reducing integration time by 20%.
- Contributed to GROW CRM by engineering enhancements to the task management system, adding workload tracking and task delegation modules, resulting in a 15% increase in team productivity.
- Developed a comprehensive API for a React-based CRM dashboard, enabling complex data filtering and automated Excel data export functionality, saving over 10 hours of manual reporting per week.
- Built an international SaaS payment processing platform using Laravel Blade, integrating the Fawaterk system for Egyptian payments with IP-based multi-currency detection, facilitating secure cross-border transactions.
- Designed full-scale APIs and scalable dashboards for Civil Engineering enterprise applications featuring robust role-based access control (RBAC), supporting over 500 daily active users.

Paymac

Aug 2024 – Feb 2025

PHP Developer

- Engineered healthcare features for Refine Application (Web and Mobile), developing algorithms for automated cancellation of unpaid orders and map-based clinical location tracking.
- Built a dynamic reporting module for the Metapos Point-of-Sale (POS) system utilizing Livewire, achieving real-time data synchronization across internal branches.
- Developed a multi-address checkout and management module for the Vitamingy ERP system using Livewire mapping, optimizing sale order fulfillment logic.
- Refactored JavaScript logic and backend API endpoints for the Flove e-commerce mobile application, vastly improving product catalog loading times and user responsiveness.

Creative Minds

May 2024 – Aug 2024

Junior PHP Developer

- Developed the core exam generation module for the "I Pluto" educational platform, engineering a dynamic system for teacher-led exam creation and automated question bank selection.
- Implemented strict business logic for the Golden Host platform to ensure data integrity, creating protections against the deletion of rented properties and establishing single-rating constraints.
- Upgraded critical backend endpoints for the Golden Ticket event registration and sales web platform, securely integrating physical and digital ticket transactions.

Top Business

Oct 2022 – Apr 2024

PHP Developer

- Engineered scalable API solutions and administrative back-offices for 7+ client applications leveraging PHP, Laravel, and Filament to streamline product management.
- Built a dynamic points and rewards engine for the Makasip application, implementing inactivity reset protocols and referral-based acquisition rules to boost user retention.
- Architected a highly reliable, full-CRUD administrative system and normalized database schema for the Enviro Group waste management application.
- Optimized database load times for the SPA beauty scheduling platform by implementing advanced Eloquent query structures and strategic pagination techniques.

PROJECTS

- **Open Source Contribution (The Software Engineer Showcaser):** Expanded functionality of a dynamic React/Next.js resume application by developing an interactive technical skills categorization pipeline.
- **Laravel Error Notifier Package:** Created and published a specialized Laravel package that leverages webhooks to automatically pipe application error stack traces directly into Slack, Telegram, and Discord channels.
- **Python Automation Bot:** Built and deployed a Python Telegram bot automating business customer inquiries, location querying, and menu retrieval routing, significantly cutting manual support hours.

EDUCATION

Damascus University

Sep 2018 – Jul 2022

Bachelor of Science, Multidisciplinary IT / Computer Science

- Coursework: Data Structures & Algorithms, SOLID Principles, Networking, Systems Administration
